

When you're planning digital transformation for your organization, you're probably focusing on the core systems that directly drive your business. And that makes sense. You want to apply your limited resources where they'll have the biggest organizational impact.

As a result, you may have systems that continue to rely on an analog dial tone. These can include fax machines; alarms and fire panels; elevator emergency phones; HVAC systems and lighting controls; 911 access; point systems such as PoS systems, election machines, lottery terminals, etc.; physical security access; and more.

But with POTS lines at end-of-life, carriers are raising prices—as much as 5X in some cases. This means these legacy systems are eating up more and more of your resources.

Digitize Your Legacy POTS Lines—Instantly

BCM One's POTS in a Box® is an easy, cost-effective way to upgrade your old wireline systems, directly replacing your POTS lines with 4GLTE, to modernize and reduce costs. POTS in a Box delivers:

Plug-and-play installation

It's easy to deploy. Simply plug it in, turn it on, and you're ready to go. It's as easy to set up as a home wireless router—even easier, in fact.

Long-lasting battery backup

The appliance has a guaranteed 8-hour minimum battery life in the event of a power outage.

Multi-line, dual-carrier support

If needed, multi-line with dual-carrier support is offered at an additional fee. Each appliance supports up to eight lines and will hold multiple SIMs so you can use dual carriers on the box.

Remote monitoring

BCM One manages the service, using our Network Monitoring platform called VitalView, to monitor and alert you immediately in the event of any service issues.

BCM One's POTS in a Box delivers:

- A POTS Lines Replacement Solution
- Easy set-up with true plug-and-play simplicity
- Lower costs
- A wireless solution for reduced outages
- Remote monitoring
