

Data Center and Co-location Services

Where your data and applications live matters—a lot. Data centers can provide a level of security (both cyber and physical), business continuity, and disaster recovery that would be cost-prohibitive to build and manage on your own.

BCM One can advise and navigate on your data center needs.

Whether you simply need shared resources or require dedicated servers, BCM One can help you navigate the wide range of data center and co-location options and provide you with a solution that delivers the reliability, performance, and security that fits your business needs and budget. Our network of data centers offers:

- Cabinet, cage, and cabling options—Whether you're looking for move-in ready or want a custom design, we can help you meet your redundancy, security, and power requirements.
- Operational reliability—Uptime SLAs of 99.99% or better ensure your business is always available and running.
- Scalability—Co-location solutions support on-demand scaling to meet evolving requirements over time.
- Global footprint—With data centers around the world, we can support your business, no matter where your customers and users are.
- Security and compliance—Rigorous controls and certifications ensure your data and applications remain secure and meet all applicable regulatory requirements.
- Green data centers—A range of environmentally sustainable options are available for high energy efficiency to reduce your carbon footprint.

BCM One's data center and co-location solutions deliver:

- Reliability
- Physical and cyber security
- Regulatory compliance
- Flexibility and scalability
