

## Managed SD-WAN

To support modern bandwidth requirements, companies are turning to SD-WAN to better prioritize and direct network traffic with the ultimate goal of improving application performance and controlling costs. When starting an SD-WAN project, businesses often focus on evaluating and selecting a provider based on the technology. However, SD-WAN is not a plug-and-play service, no matter what the vendor promises. You want to get the technology right, but it's even more important to get the implementation right. If your SD-WAN installation isn't configured correctly into your network design, you could face high costs and even project failure.

### The BCM One SD-WAN Advantage

When you work with BCM One, you not only deploy the optimal SD-WAN solution for your business, you implement the solution correctly—and you can offload the burden of managing all the connectivity circuits and carriers. Hence we offer Managed SD-WAN. We've got you covered across every stage of your SD-WAN initiative.

There are various advantages of working with BCM One instead of purchasing your SD-WAN solution directly from a SD-WAN provider:

- **Vendor selection:** Our certified network engineers have carefully hand-selected leading SD-WAN providers that we trust, and therefore that we have partnered with. We'll assess your network requirements and select the best SD-WAN solution based on your business, technical and budgetary requirements.
- **Successful implementation:** Our specialized SD-WAN implementation team of certified network engineers will deploy your SD-WAN solution right the first time around.
- **Ongoing management:** Based on our rich telecom history and relationships with carriers globally, you can confidently turn over the SD-WAN management headache to BCM One.
- **Proactive monitoring:** Our 24x7 proactive network monitoring tool, VitalView™, provides extra insurance for optimal performance.

In summary, the gaps BCM One fills with an SD-WAN solution include: pre-sales engineering, project management, implementation support, billing aggregation and Day 2 support.

### Benefits of SD-WAN with BCM One

- **Transport and carrier agnosticism:** Choose any provider on a per-location basis for the most bandwidth at the best cost
- **Intelligent path control:** Application flows are steered through the best available path for a great end-user experience
- **Application visibility and optimization:** Monitor and report on all applications running on the network with granular control
- **Secure connectivity:** Use the latest encryption technologies on overlay tunnels with options to add in firewall functions
- **Centralized management:** All devices are controlled from a single portal, no matter how many locations you have
- **VitalView™:** Our proactive 24x7 monitoring tool is incorporated into your SD-WAN solution
