

## Managed SD-WAN

SD-WAN supports modern bandwidth requirements by prioritizing and intelligently directing network traffic. Companies that transition to SD-WAN experience improved application performance and cost control.

When starting an SD-WAN project, businesses often focus on evaluating and selecting a provider based on the technology. However, SD-WAN is not a plug-and-play service, no matter what the vendor promises. You want to get the right technology, but it is even more important to get the implementation right. If your SD-WAN installation is not configured properly into your network design, you could face high costs and even project failure.

### The BCM One SD-WAN Advantage

When you partner with BCM One you can rest assured that you not only have the optimal SD-WAN solution deployed for your business, but it has been implemented correctly. With our Managed SD-WAN offering, you can go a step further and offload the burden of managing the connectivity circuits and carriers to us. We have you covered across every stage of your SD-WAN initiative.

There are various advantages of working with BCM One instead of purchasing your SD-WAN solution directly from an SD-WAN provider:

- **Vendor Selection** - Our certified network engineers have carefully hand-selected leading SD-WAN providers that we trust. We will assess your network requirements and select the best SD-WAN solution based on your business, technical, and budgetary requirements.
- **Successful Implementation** - Our specialized SD-WAN implementation team of certified network engineers will deploy your SD-WAN solution right the first time.
- **Ongoing Management** - Based on our rich telecom history and relationships with carriers globally, you can confidently turn over the SD-WAN management headache to BCM One.
- **Proactive Monitoring** - Our 24x7 proactive network monitoring tool, "VitalView™", provides added insurance for optimal performance.

The BCM One solution is turnkey and comprehensive, including pre-sales engineering, project management, implementation support, billing aggregation, and Day-2 support.

### Benefits of SD-WAN with BCM One

#### Transport & Carrier Agnosticism:

You can choose any provider on a per-location basis for the most bandwidth at the best cost.

#### Intelligent Path Control:

Application flows are steered through the best available path for a great end-user experience.

#### Application Visibility &

**Optimization:** Monitor and report on all applications running on the network with granular control.

**Secure Connectivity:** We use the latest encryption technologies on overlay tunnels with options to add in firewall functions.

**Centralized Management:** All devices are controlled from a single portal, no matter how many locations you have.

**VitalView™:** We incorporate our proactive, 24x7 monitoring tool into your SD-WAN solution.
