

Unlimited Wireless

Now you can easily add redundancy and flexibility to your BCM One voice and data applications with the convenience and power of 5G. Businesses rely on Internet access for a wide range of applications, such as point-of-sale systems, digital signage, video surveillance, ATMs and kiosks, email, web services and more. But high-speed connectivity, especially diverse terrestrial services, isn't available everywhere, even in 2023.

Many applications rely on dual Internet connections to perform at their peak potential, but expanding fiber to where you need it can be cost-prohibitive. 5G is here and offers increased bandwidth and reduced network latency, allowing even more applications to perform as intended. Unlock its potential for your business with BCM One's convenient program.

Unlimited wireless—the BCM One way

BCM One offers fast and affordable enterprise-class connectivity on the nation's largest, fastest, most reliable 5G networks.

> Fully managed

The comprehensive solution includes a high-grade Cradlepoint W1850 5G adapter*, activation, expert configuration, technical support, remote monitoring and management, and static IP.

> Truly unlimited

With BCM One unlimited 5G wireless, there are no caps, no throttling, and no overages, so you can count on consistent performance and predictable billing.

> Future-proof

5G not yet available in your area? No problem—the BCM One Unlimited Wireless solution allows you to use LTE now** and then automatically take advantage of 5G when it becomes available with no action required.

> Simple setup

It's easy to add unlimited 5G wireless to your existing BCM One services. Our hardware is pre-staged to be plug-and-play with the ability to switch providers without a truck roll. And, of course, it's all billed through your one invoice and supported by your one BCM One point of contact.

> Dual SIM option

Add even more redundancy with the option to have an additional SIM card for additional carrier diversification.

*Requires a new three-year service agreement. BCM One retains title to the Cradlepoint device, which must be returned when service is terminated. 5G service will be provided on the best available network. Carriers include AT&T, and Verizon Wireless. 5G services are not available in all areas. Speeds may be limited to 100 Mbps with faster speeds available.

**Speeds up to 50 Mbps – Data can become deprioritized (throttled) after 150 GB of consumption on LTE. Data usage is capped at 300 GB per month on LTE.
